

AeliaSoft

# **RAM Suite**

This Suite covers computer software for Reliability, Availability and Maintainability (RAM) analyses for use in engineering applications. Primarily for users focused on asset performance management and maintenance optimisation.

B

# **Powerful Models**

Life Data Analysis

Weibull++

ReliaSoft

Core Reliability Tool Superior Plots/Reports

RCM++

Reliability Centred Maintenance Flexible Reports **Highly Configurable** Databased-Driven

# **BlockSim**

System Modelling and Simulation Fault Trees RBDs **Reliability Phase Diagrams** Markov

ReliaSoft Weibull++ is a complete life data analysis tool that ensure reliability, forecast warranty, and accelerate tests and reliability growth planning

# **Features**

- Utilises multiple lifetime distributions, warranty and degradation data analysis, design of experiment and more with a clear and intuitive interface geared toward reliability engineering.
- Offers optionally licensed features of Accelerated Life Testing for accelerated test planning and data analysis
- Offers Reliability Growth to analyse data from both developmental testing and fielded repairable systems in order to monitor reliability improvements over time and predict failures before they occur.

## **Benefits**

- Compare suppliers or designs based on reliability.
- Ensure reliability within a specific time frame and confidence
- Make predictions and detect outliers during the useful life (or warranty) period
- Gain deeper insights with design of experiments
- Extrapolate failure times based on performance
- Use plots and other reports to effectively communicate expected performance to management

ReliaSoft

0

# **Features**

- Provide complete solution for accelerated test planning and quantitative accelerated life testing data analysis.
- Design accelerated life tests and calculate necessary reliability metrics to significantly reduce test times and lower development costs.
- With the most complex accelerated test data analyses and test plans available for multiple stress types, where stress is constant or varies by time, you will be able to produce more robust designs.

- Understand and quantify the effects of stress (or other factors) on product life
- Design accelerated tests to achieve desired objectives
- Lower development costs with improved designs
- Significantly reduce test time and produce more robust designs
- Provide clarity and support decisions with enhanced reports and plots

# Accelerated Life Testing module

# Two versions to analyze data obtained from quantitative accelerated life tests

### **Accelerated Life Testing - Standard**

An entry-level version for the reliability professional interested in basic quantitative accelerated life testing data analysis applications.

- Arrhenius, Eyring, Inverse power law, Temphumidity, Temp-nonthermal
- Varying Stresses with data analysis of 1 or 2 stresses that do not vary with time
- Cannot analyse data with indicator variables
- Monte Carlo Data Generation is only available for supported models

### **Accelerated Life Testing - PRO**

An advanced version with capabilities made possible by extensive research and development in complex quantitative accelerated life testing data analysis techniques.

- All life-stress relationships models available in Standard version as well Generalised Eyring, Proportional hazards, Generalised loglinear and Cumulative damage
- Ability to analyse data with up to 8 stresses that may vary with time and provide a utility to define and manage stress profiles. Use level stress can also be specified to vary with time

- Can analyse data with indicator variables
- Monte Carlo Data Generation is available for all models, including those with multiple and/or time-dependent stresses

# Reliability Growth module

Reliability Growth module allows you to apply reliability growth models to analyse data from both developmental testing and fielded repairable systems.

# Features

- Monitor reliability improvements over time and predict failures before they occur to evaluate the reliability growth management strategy.
- Quantify reliability growth across multiple test phases, design test plans for repairable systems and determine the test time required per system in order to demonstrate a specified reliability goal.
- Provide advanced methods for reliability growth projections, planning and management.
- For systems operating in the field, you can calculate optimum overhaul times and other results without the detailed data sets.

- Predict failures before they occur and monitor reliability improvements over time
- Quantify reliability growth achieved with each successive design prototype
- Determine the feasibility of achieving reliability goals with a given test/fix strategy
- Use grouped (interval) data analysis to evaluate fleet warranty data in order to estimate future returns
- Experiment with sample sizes using simulation tools

# **Reliability Growth module**

### Integrate repairable systems analysis with other processes

The Reliability Growth module facilitates the analysis of repairable systems data using the Crow (AMSAA) model. It allows you to get an overview of the system without having the large data requirements that would normally be required for system reliability analysis.

With the Reliability Growth module, you can track the progress of the system during development phase and then use ReliaSoft BlockSim in accordance with the already known results to gain more detailed information.

# Weibull++ Software Highlights

#### Data types (individually or in groups)

- Complete (failure time)
- Right censored (suspension time)
- Left censored
- Interval censored
- Free-form

#### **Distributions**

(wizard to find best fit for your data)

- Weibull
- Normal and Lognormal
- Exponential
- Gamma and Generalised Gamma
- Logistic and Loglogistic
- Gumbel
- **Bayesian-Weibull**
- Mixed Weibull
- Competing Failure Modes (CFM) •

#### Analysis types

- Rank Regression on X (RRX) •
- Rank Regression on Y (RRY)
- Maximum Likelihood (MLE)
- Non-Linear Rank Regression

#### **Ranking methods**

- Kaplan-Meier
- Median Ranks

#### **Confidence bounds methods**

- Likelihood ratio
- Fisher Matrix
- **Beta Binomial**
- Bayesian (BSN)

#### Calculation and plot types

- Probability •
- Reliability vs. Time
- Unreliability vs. Time
- Failure rate vs. Time •
- pdf plot •
- Contour plot •
- Failures/Suspensions histogram •
- Failures/Suspensions pie •
- Failures/Suspensions timeline

#### **Related analyses**

- Warranty analysis
  - Nevada
  - Times-to-failure
  - Dates of failure
  - Usage •
  - Times-to-failure and Usage •
- Degradation analysis
  - Nondestructive (Linear, Exponential, Power, Logarithmic, Gompertz, Lloyd-Lipow)
  - Destructive (Linear, Logarithmic, Lloyd-Lipow)
- Event log conversion •
- Recurrent event data analysis
  - Mean cumulative function
  - General renewal process
- Non-Parametric Life Data Analysis
  - Kaplan-Meier
  - Simple actuarial
  - Standard actuarial
- Design of Experiments (DOE)
  - One Factor designs
  - Factorial designs
  - Response surface method designs
  - Taguchi Robust designs
  - Mixture designs
  - **Reliability DOE** •

ReliaSoft

# Weibull++ Software Highlights (continued)

#### **Tests of comparison**

- Data set life comparison
- Stress-Strength analysis

#### Data set simulation

- Monte Carlo data
- SimuMatic®

#### **Other utilities**

- Reliability test design
- Block diagrams
- Maintenance planning tool
- Non-linear equation root finder & Fit solver
- Quick Parameter Estimator
- **Quick Statistical Reference**

#### Advanced plotting tools

- Overlay plots (aka multi-plots)
- Side-by-side plots
- **RS Draw® Metafile Graphics Editor**
- 3D plots

#### **Customisable reports**

- Synthesis workbooks (spreadsheet and word processing modules combined)
- Function wizard

#### **Reliability program integration**

- Publish models based on data analyses and create metrics to track and display KPIs
- Extract data from XFRACAS or from an external database
- Export from the event log and maintenance planning tools with BlockSim

#### Accelerated Life Testing module

- Life-Stress relationship models (single or multiple stress; where stress is constant or varies with time)
- Accelerated test plans
- Tests of comparison (Data Set Life, Stress-Strength analysis)
- Ability to import profiles from nCode GlyphWorks® (.s3t)

#### **Reliability Growth module**

- Models for traditional reliability growth •
- Models for growth projections, planning and management
- Models for fielded systems
- Reliability growth program plans for multiple test phases
  - Growth planning folio
  - Multi-phase data sheet
  - Multi-phase plot

#### Available services

- Detailed user documentation
- Practical example files •
- Quick tour guide •
- Training for theory + software
- Professional consulting services

Holistic Asset Management is the Australia and New Zealand reseller of ReliaSoft Software from HBM Prenscia Inc. These expert analysis tools are benchmarks in the reliability industry and are widely used in various industry sectors to facilitate the practical application of reliability in maintenance, asset management, product development and after sales.

ReliaSoft RCM++ facilitates the Reliability Centered Maintenance (RCM) analysis approach to improve reliability of the assets and optimise maintenance planning.

# **Features**

- Supports all the major RCM industry standards, such as ATA MSG-3, SAE JA1011 and SAE JA1012.
- Includes configurable equipment selection, failure effect categorisation and maintenance task selection capabilities.
- Provides full-featured capabilities for FMEAs and related analyses.
- Provides simulations that can be used to compare maintenance strategies based on cost and availability, and a calculator to estimate the optimum replacement interval.

### **Benefits**

- Develop cost-effective scheduled maintenance plan for a physical asset with an acceptable level of functionality and acceptable level of risk
- Evaluate whether preventive maintenance (PM) is appropriate and determine the optimum preventive maintenance intervals to minimise downtime and operating cost
- Save time on data entry and analysis processes to drive more efficient and more effective analyses
- Assess risks at different levels using FMEA analysis and easily create maintenance tasks by configuring equipment and categorising failure effects

· ReliaSoft

# **RCM++ Software Highlights**

#### **RCM standards**

- SAE JA1011/1012
- MSG-3
- NAVAIR 00-25-403
- Highly configurable to define your own custom profiles

#### Support for RCM logic

- Equipment Selection
  - Yes/No Questions
  - Criticality Factors (Rating Scales)
- Failure Effect Categorization (FEC)
- Maintenance Task Selection
- Highly configurable to define your own logic charts

#### **Maintenance strategies**

- Run to failure
- Preventive Maintenance (PM)
  - Scheduled repair
  - Scheduled replacement
  - Scheduled service
- Failure finding inspection
- Predictive Maintenance (PdM)
  - On condition inspection
- Comparative Analysis

#### **Reliability calculations**

- Analytical and/or simulation results
- Reliability
- Average availability
- Operating cost

#### **Maintenance planning**

- Optimum replacement time
- For a given maintenance strategy:
  - Cost per operating time
  - Average availability
- Flexible task packaging
- Teams/multiple crews for tasks
- Multiple spare part tools for tasks

#### Organisation and data structure

- Easy to build system configurations
- 3 views for data entry
  - Hierarchy (Tree) View
  - Worksheet View
  - Filtered View

#### Easy to find and reuse data

- Browse or query to import existing data
- Use keywords to find and import existing record descriptions
- Copy/paste and drag/drop

#### **Predefined reports and charts**

- Equipment selection
- Functional failure analysis
- Failure effect categorisation
- Maintenance task selection
- Maintenance task summaries
- Pie, bar and Pareto charts

#### **Tools and utilities**

- Custom query utility
- Customised templates for imports, queries and reports
- Analysis planning tool
- Links and attachments
- Find and replace
- Action alerts via e-mail, SMS text message or Synthesis portal message

#### **Integrated FMEA capabilities**

- Configurable for all types of FMEA
- Risk Priority Numbers (RPNs)
- Criticality analysis
- Track corrective actions
- FMEA reports, charts and dashboards

#### Import types

- Microsoft Excel® build and manage custom templates for import/export
- Import from XFMEA, RBI, MPC and XFRACAS

#### File output

- Microsoft Excel® and Microsoft
   Word®
- Easily export to \*.pdf, \*.rtf or \*.html from Word or Excel

#### **Reliability program integration**

- Use published models to define the RAMS characteristics of items
- Work with a Failure Modes and Reliability Analysis (FMRA) that is synchronised with BlockSim
- Use FMEA data to build fault trees in BlockSim
- Share system configuration and failure mode data with XFRACAS
- Import data from an MPC analysis
- Push calculated/simulated reliability and availability to metrics

#### **Available services**

- Detailed user documentation
- Practical example files
- Quick tour guide
- Training for theory + software
- Professional consulting services

Holistic Asset Management is the Australia and New Zealand reseller of ReliaSoft Software from HBM Prenscia Inc. These expert analysis tools are benchmarks in the reliability industry and are widely used in various industry sectors to facilitate the practical application of reliability in maintenance, asset management, product development and after sales.

ReliaSoft BlockSim provides a comprehensive platform for system reliability, availability, maintainability and related analyses that allows you to model the most complex systems and processes using RBDs, FTA or Markov diagrams.

### **Features**

- Offers optionally licensed features for Process Flow to upstream maintenance optimisation for any processes and chemical industries.
- Offers optionally licensed features for Event Analysis to model and run complex analyses for any probabilistic or deterministic scenario.
- Facilitates a wide variety of analyses for both repairable and non-repairable systems.

## **Benefits**

- Identify critical components (or failure modes).
- Determine the most effective ways to improve system performance through design improvements and/or maintenance planning.
- Use simulation to obtain estimated performance metrics that can facilitate decisionmaking in various areas (e.g., scheduling planned maintenance, planning for spares, identifying bottlenecks in production throughput, estimating life cycle costs).
- Identify vulnerabilities in a system and determine the most effective ways to reduce risk.
- Enhance your maintenance optimisation and simulation modeling using process flow diagrams
- Make crucial decisions easier with life cycle cost analysis

ReliaSoft

# BlockSim

# Process Flow module

*Process Flow module upstreams maintenance optimisation for any processes and chemical industries.* 

# **Features**

- Models the reliability and maintainability of equipment and analyses multiple flow types within the system.
- Using simulation approach you are able to choose the best scenario and make confident evidence-based decisions.
- Offers complete solution for process design changes, where you can create and simulate various flow models to improve processes, increase efficiency, and reduce costs.
- Can be used for the visual design and optimisation of any technical processes such as chemical plants, Oil & Gas facilities, power stations, complex manufacturing operations and biological processes such as water treatment.

- Solve problems and find the best scenario
- Improve design and optimise any technical processes
- Model the most complex systems with multiple and various flows
- Identify bottleneck to achieve maximum performance
- Make confident evidence-based decisions with highly intuitive graphical interface

# **Features**

- Model and run complex analyses for any probabilistic or deterministic scenario and optimise the results needed for further analysis.
- Develop ideas, workflows and estimate results of interest with a familiar and intuitive flowcharting concept.
- Track real-time values and evaluate equipment's behavior over time with reliability or availability results by using sensitivity analysis.

- Use flowchart simulation to model complex scenarios and forecast performance under a variety of different design and usage scenarios
- Perform sensitivity analysis to evaluate how key inputs will affect the results
- Automatically estimate optimum values by performing multiple simulation runs with different variables
- Wide range of applications for risk/safety analysis, complex reliability modelling, decision making, maintenance planning, optimisation, operational research and logistics, etc.
- Design and build your own analyses without having to write any code

# **BlockSim Software Highlights**

#### **Reliability Block Diagrams (RBDs)**

- Series, Parallel and Complex
- k-out-of-n
- Standby
- Load sharing
- Subdiagrams
- Multi blocks and Mirrored blocks

#### **Fault Trees**

- AND and OR Gates
- Voting Gates (k-out-of-n)
- Inhibit Gates
- NOT, NAND and NOR Gates
- Standby configurations using:
  - Standby Gates
  - Priority AND Gates
  - Sequence Enforcing Gates
- Load Sharing Gates
- Subdiagrams
- Utility to trace a subdiagram to the top node

#### **Analytical diagrams**

- Exact system reliability equation
- Minimal Cut Sets
- Metrics:
  - Reliability and probability of failure
  - Conditional reliability
  - Conditional probability of failure
  - Reliable life (aka warranty time)
  - BX% life
  - Mean life
  - Failure rate
- Plots:
  - Reliability/Unreliability vs. Time
  - pdf
  - Failure Rate vs. Time

For more information visit:

1300 449 110

Reliability importance plots

#### **Simulation diagrams**

Duty cycles

sales.

- Maintenance durations
- Restoration factors
- Direct & indirect maintenance costs
- Spare Parts availability
- Maintenance crew logistics
- State change triggers
- Batch simulation
- Metrics:
  - Mean and point availability
  - Mean and point anavailability
  - Reliability and probability of failure
  - Mean time to first failure
- Plots (for system and/or block):
  - Point reliability
  - Point availability
  - Mean availability
  - Costs
  - Up/Down timeline
  - Block or system downtime
  - Expected failures
  - Expected downing events
  - Criticality metrics (RS FCI)
  - Block bubble plot
  - Crew metrics
  - Spare part metrics
  - Throughput analysis
  - Throughput
  - Block excess capacity
  - Block backlog and backlog processed
- Maintenance planning

#### Phase diagrams

- Maintenance phases
- Node and stop blocks
- Varying throughput
- Subdiagrams

#### **Process Flow module**

• Analysis of continuous throughput

Holistic Asset Management is the Australia and New Zealand reseller of ReliaSoft Software from HBM Prenscia Inc. These expert analysis tools are benchmarks in the reliability industry and are widely used in various industry sectors to facilitate the practical application of reliability in maintenance, asset management, product development and after

www.holisticam.com.au

Multiple types of flows

#### **Event Analysis module**

- Easy to build flowchart models
- Equation building utilities
- Simulation results (in Excel®compatible spreadsheet and or directly in the flowchart)
- Sensitivity analysis
- Optimisation

#### Markov diagrams

- Discrete
- Continuous

#### System improvement tools and reports

- Allocation analysis
- Optimum replacement
- FRED reports
- Overlay plots (aka Multi-plots)
- Synthesis workbooks (spreadsheet and word processing modules combined)

#### **Reliability program integration**

- Use models created from analyses performed in other ReliaSoft applications
- Build RBDs or Fault Trees from data in XFMEA/RCM++/RBI or Lambda Predict
- Use BlockSim diagrams to simulate response data for Weibull++
- Use BlockSim diagram results in RENO flowcharts
- Publish models based on diagram analyses and create metrics to track and display KPIs
